

MUHAMMAD RAFI ANDRIANTO

Jl Titihan III Blok HF 10 no 1 Pondok Aren, Tangerang Selatan 15227

+6281287348832 | rafiandr97@gmail.com

EDUCATION

Ritsumeikan University, Osaka, Japan

2021 – 2025

Bachelor of Engineering, College of Information Science and Engineering

- GPA: 4.36/5.0
- Relevant Coursework: Artificial Intelligence, Software Engineering, Data Structures and Algorithms, Database, Computer Networks, Web Information Engineering

Purwadhika Digital Technology School, BSD, Indonesia

2026

Data Science and Machine Learning

SKILLS

Programming Language: Python, SQL, HTML, CSS, Javascript

Frameworks and Tools: TensorFlow, PyTorch, MediaPipe, Scikit-learn, Tableau, Looker Studio, Astah Professional

Languages: Indonesian (native), English (fluent), Japanese (beginner)

PROJECTS

E-Commerce Late Delivery Prediction (Olist)

Python, Scikit-learn, SQL, Pandas, Tableau

- Evaluated multiple classification models and developed a tuned LightGBM pipeline to identify high-risk delivery orders prior to shipment.
- Conducted interpretability analysis that provides the internal operations team with proactive risk-mitigation strategies to protect platform reputation.

Microplastic Accumulation Prediction

Python, TensorFlow, Keras, Scikit-learn

- Developed a predictive model to address the challenges posed by microplastics using machine learning and deep learning models, specifically Random Forest and Long Short-Term Memory (LSTM).
- The model provides insights into the relationship between environmental factors and microplastic distribution, aiding in mitigation and prevention efforts.

Hotel Booking Cancellation & Revenue Loss Prediction

Python, Scikit-learn, SHAP, Pandas

- Developed a tuned XGBoost predictive pipeline across 11 benchmarked algorithms to identify prospective booking cancellations and mitigate revenue leakage.
- Conducted interpretability analysis and threshold optimization to translate key cancellation drivers into actionable overbooking and policy recommendations for executive stakeholders.

Skateboarder Performance Analysis System

Python, TensorFlow, Mediapipe

- Developed a dual-CNN computer vision architecture with pose estimation (MediaPipe) to segment video frames and classify trick execution phases.
- Built a frame-alignment pipeline that compares a user's trick footage against an ideal benchmark video, highlighting body joint trajectory discrepancies.

ACHIEVEMENTS

Ritsumeikan University Tuition Reduction Award Academic Year 2023 & 2024

2023 & 2024

- Acknowledged for being among the top 20% of students and granted a 50% tuition reduction for the academic year 2023 & 2024.

Ritsumeikan University International Students Assistance Scholarship

2022

- Received a grant of ¥250,000 as a testament to academic excellence and contributions as an international student.
